Q&A System

how do you define ASAP methodology

Ask Question

Based on the context provided, ASAP methodology can be defined as:

A phased, process-oriented methodology designed to streamline implementation projects and minimize risk. It includes a rich toolkit of methodologies and accelerators. The ASAP methodology uses roadmaps that cover important aspects and phases of SAP solution implementation, which can be filtered to reflect specific project types and solution scopes. These roadmaps provide a structured list of activities, recommended tools, services, methodologies, and field-developed accelerators such as how-to guides, templates, examples, standards, product information, and best practices.
